Executive Summary

This project analyzes students' social media usage patterns and their relationship with academic performance, sleep, mental health, relationship conflicts, and addiction levels. Using Microsoft Excel, an interactive dashboard was developed to identify usage trends, compare platform preferences, and generate data-driven insights to support healthier digital habits.

1. Project Overview

Field	Details
Project Title	Student Social Media Usage & Well-being Analysis (2025)
Domain	Education / Social Media Analytics
Tool	Microsoft Excel
Dataset	Students Social Media Addiction Dataset (2025)
Source	Kaggle

2. Business Problem

Educational institutions and parents lack clear insights into how students' social media usage relates to academics, sleep, mental health, and relationships. This project analyzes student survey data to identify usage patterns and support data-driven decisions for improving student well-being.

3. Objectives

- Analyze students' social media usage patterns.
 - Identify the most popular social media platforms.
 - Study the relationship between usage and academic performance.
 - Analyze sleep patterns and mental health.
 - Compare usage across gender and academic levels.
 - Generate business insights and recommendations.
-

4. Dataset Information

- **Dataset:** Students Social Media Addiction Dataset (2025)
- **Source:** Kaggle
- **Records:** 705 Students
- **Countries:** Multiple Countries

Features

- Student ID
 - Age
 - Gender
 - Academic Level
 - Country
 - Average Daily Usage Hours
 - Most Used Platform
 - Academic Performance Impact
 - Sleep Hours
 - Mental Health Score
 - Relationship Status
 - Relationship Conflicts
 - Addiction Score
-

5. Methodology

- Collected dataset from Kaggle.
 - Cleaned and validated the dataset.
 - Performed Exploratory Data Analysis (EDA).
 - Created Pivot Tables and Pivot Charts.
 - Built an interactive Excel dashboard.
 - Generated business insights and recommendations.
-

6. Dashboard Overview

The dashboard includes:

- KPI Cards
 - Gender Distribution
 - Academic Level Distribution
 - Platform Usage
 - Academic Impact by Gender
 - Sleep Hours by Academic Impact
 - Top Apps by Average Daily Usage
 - Mental Health by Platform
 - Country-wise Mental Health
 - Relationship Conflicts by Platform
-

7. Analysis & Business Insights

Student Demographics

Metric	Value
--------	-------

Total Students	705
----------------	-----

Average Age	20.66 Years
-------------	-------------

Insights

- Undergraduate students form the largest group (353).
- Gender participation is almost equally distributed.

Business Insight

Student participation is balanced, making the analysis representative across genders.

Platform Usage

Platform Students

Instagram 249

TikTok 154

Facebook 123

WhatsApp 54

Twitter 30

Insights

- Instagram is the most popular platform.
- TikTok and Facebook are the next most used platforms.
- WhatsApp users have the highest average daily usage.

Business Insight

Awareness campaigns should primarily target Instagram, TikTok, and WhatsApp users.

Academic Performance

Insights

- Students reporting academic impact also report lower average sleep.
- Academic impact is similar across both genders.

Business Insight

Promoting balanced screen time may help students maintain healthier study habits.

Sleep Analysis

Metric Value

Average Sleep 6.66 Hours

Insights

- Average sleep is below the recommended 7–9 hours.
- Students reporting academic impact sleep fewer hours than others.

Business Insight

Educational institutions should encourage healthy sleep routines alongside digital wellness.

Mental Health

Metric	Value
--------	-------

Average Mental Health Score	6.23 / 10
-----------------------------	-----------

Insights

- Overall mental health is moderate.
- LinkedIn and LINE users show the highest average mental health scores.

Business Insight

Mental health awareness programs can support students in maintaining digital balance.

Relationship Conflicts

Insights

- WhatsApp and TikTok users report relatively higher relationship conflicts.
- Conflict levels vary across platforms.

Business Insight

Students should be encouraged to practice responsible social media usage to reduce unnecessary conflicts.

8. Key Findings

- 705 students participated in the survey.
- Average daily social media usage is **4.92 hours**.
- Average sleep duration is **6.66 hours**.
- Instagram is the most popular platform.
- WhatsApp users have the highest average daily usage.
- Undergraduate students form the largest student group.
- Students reporting academic impact also report lower sleep hours.
- Average mental health score is **6.23/10**.
- India contributed the highest number of responses.

9. Recommendations

- Promote balanced daily social media usage.
- Encourage students to maintain healthy sleep schedules.
- Conduct digital well-being awareness programs.
- Introduce time management and screen-time awareness sessions.
- Strengthen student mental health support initiatives.
- Encourage responsible use of high-engagement social media platforms.

10. Skills Demonstrated

Technical Skills

- Data Cleaning
- Exploratory Data Analysis (EDA)
- Pivot Tables
- Pivot Charts
- Dashboard Design
- KPI Development
- Data Visualization
- Excel Functions

Business Skills

- Data Analysis
 - Trend Analysis
 - Customer/User Segmentation
 - KPI Analysis
 - Data Storytelling
 - Business Recommendations
 - Insight Generation
-

11. Conclusion

This project analyzed the social media behavior of **705 students** using Microsoft Excel. The dashboard highlights platform preferences, usage patterns, academic impact, sleep habits, mental health, and relationship conflicts. The findings provide valuable insights that can help educators, parents, and policymakers promote healthier digital habits and improve student well-being through informed, data-driven decisions.
